

# Release Notes

MedCen 6.2 Build 39

## Care Plus Electronic Messaging

An issue was resolved which prevented an electronically registered patient from being reviewed.

Additionally, please note if you have manually registered a patient, you will need to remove them and re-enrol the patient in Care Plus with original date for that patient.

To remove the patient, open the Clinical Data for that patient (press **F7** on the selected patient in the Contacts List), click on the **Clinical Projects** tab and click on the **Go** button beside the Care Plus section. Click the **Remove** tab in the new Care Plus window that pops up, then click on the checkbox in the bottom left corner of the window (in the highlighted area of the above picture) and click on **Process**. A confirmation pop up will let you know the patient has been removed.

## Systolic

An issue was resolved which fixed blood pressure readings that would not display correctly when viewed after they had been entered.
