

Release Notes

MedCen 7.1 Build 150

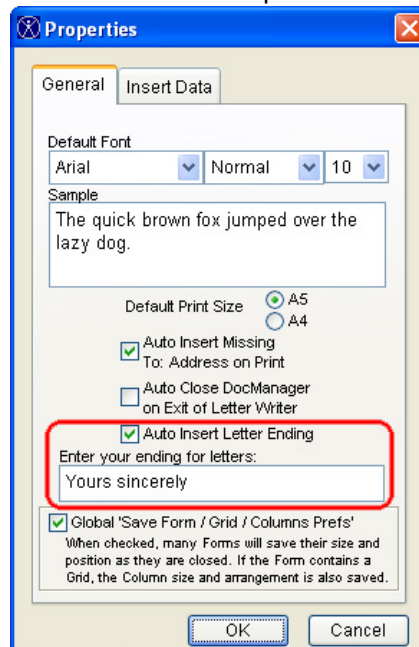

From the 'Wish List'

Every user can have a say about how they want MedCen to work for them. For each update, we try to include as many suggestions or requests that you have made. This update we included:

-  Some users may have noticed that their Inbox filter list was missing some providers, this has since been corrected to display all providers.
-  Since removing "Yours sincerely" from the end of new letters (at a number of users request), a number of other users have asked that we put it back. 😊

We have now included an "Ending" property where you can auto insert any ending you want to insert at the end of a new letter. To edit this property you will need to open the properties form by right clicking on the Letter Writer form and selecting "Properties". This will open the Letter writer Properties form as shown here.

By "ticking" the Auto Insert Letter Ending check box, you can then type in your ending to be inserted at the end of any new letter that is created. By default it will say "Yours sincerely". **Note:** The ending currently has a limit of 50 characters.

-  The "Auto Insert Missing To: Address on Print" property of the Letter Writer's property form (see above image), has been improved to remove inconsistent letter formatting behaviour when automatically inserting address details.
-  When declining one of the new PCV7 vaccines on the Imms tab of the Clinical Data form, the background colour of the text box did not immediately change to orange to show the vaccine had been declined. This has now been fixed so that the text box will immediately show the declined status.

- ❗ In the Appointment Book, some users have noticed that while the Red Flag or CarePlus symbols are enabled, they can't use the up or down arrow keys to navigate the Appointment Book. This has been fixed to work as before.

- ❗ Users have noticed that having the CarePlus symbol enabled in the Appointment Book has been causing some performance issues, taking considerable time to display changes. There have been a number of enhancements to improve the speed of the Appointment Book with the CarePlus symbol enabled, we encourage all users to try this feature again and let us know if they have any further performance problems.

- ❗ When deleting appointments from the Appointment Book form, some users may have noticed that the deleted appointment would not clear properly from the grid until the user clicked elsewhere in the Appointment Book or if they deleted the appointment a second time. This has been fixed to immediately show when an appointment has been deleted.

- ❗ Some users have noticed that sometimes when printing Consult Slips for an individual patient that has just been added to the Appointment Book, that the slip is printed for the wrong patient. This issue has been resolved.

- ❗ The pop up box asking if you want to see the release notes, sometimes has not displayed on machines after performing an update. This has now been fixed to always display after doing an update.

- ❗ Some users have found the recent changes to the Clinical Data form and Inbox form have left these forms too large for use on lower resolution screens. Both these forms have had their minimum size changed to allow them to be sized smaller.
