

Release Notes

MedCen 7.1 Build 525

From the 'Wish List'

Every user can have a say about how they want MedCen to work for them. For each update, we try to include as many suggestions or requests that you have made. This update we included:

-  In a previous update, we separated READ codes from the description within the Problems List. Since then it was mentioned that you can no longer search for READ codes when using the 'Easy Search' tool. We have updated this to now also include the code fields of the Problems, Past History and Family Lists when using the Easy Search tool.
-  The CarePlus module has had some improvements in data validation to ensure the electronic files sent out are more accurate.

No More Bugs!

Bugs can show up in software in many forms. Some will be minor, resulting in some unexpected behaviour. More serious bugs will cause error messages to appear or even cause the system to 'crash'. Let us know if you find any bugs and help us eliminate them! You can contact us by calling 0800 MED CEN (0800 633 236) or by emailing us at support@medcen.co.nz

Resolved Issues

-  Error messages generated while using the CarePlus module for patients.
-  Rural practice ACC electronic claims would sometimes calculate incorrect fees for crutches.
-  The 'Add New' dropdown list in the Family History tab of the Clinical Data window didn't populate the fields as expected when an item was selected.
-  The '1st Diagnosis' date was not being saved correctly in the Past History tab of the Clinical Data window.
-  The READ code tool in the Clinical Notes window was incorrectly storing codes into the problem list.
