

Release Notes

MedCen 7.1 Build 550

From the 'Wish List'

Every user can have a say about how they want MedCen to work for them. For each update, we try to include as many suggestions or requests that you have made. This update we included:

- ❑ In consultation with Rural Canterbury PHO, the Mental Health Extended Consult e-form has had some evaluation question changes. The existing pre and post Kessler 10 questions have been replaced with a single question *"Has this consultation helped you with your problems"*.
- ❑ GPIA is no longer available and has been disabled within the ACC18 window. The GPIA can no longer be printed and it also has been removed from the Transaction window.
- ❑ The Daylog window has been improved to update the list of patients more frequently, so that when a change has been made to the Daylog, it should be reflected on each screen within seconds.

No More Bugs!

Bugs can show up in software in many forms. Some will be minor, resulting in some unexpected behaviour. More serious bugs will cause error messages to appear or even cause the system to 'crash'. Let us know if you find any bugs and help us eliminate them! You can contact us by calling 0800 MED CEN (0800 633 236) or by emailing us at support@medcen.co.nz

Resolved Issues

- ❑ Printed consult slips had references to old immunisation schedules displaying when the next immunisation was due.
- ❑ HPV immunisation events had the "Send NIR Message" button disabled so the message could not be resent if there were changes made.
- ❑ The 'Change View' option within the Clinical Notes window wasn't displaying as expected.
